

eDataVault

eDataVault is 24 Seven Discovere's proprietary solution for the secure storage, management and production of all your electronic media (hard drives, backup tapes, servers, etc). Born from extensive experience in handling large scale forensic collections and electronic discovery projects, eDataVault offers a low-cost environment for the physical **Storage** of your media, which can then be accessed to **Search** and **Process** information relevant to a lawsuit or litigation hold. Additionally, eDataVault will comply with your internal Data Destruction Policy and automatically **Purge** any media (not under a current hold) when the relevant termination date is reached.

Features:

- Secure physical storage of all your electronic media
- Complete catalogue of all media available 24/7 through dedicated web interface
- Rapid search capabilities of catalogued data across all media
- Instant Litigation Hold capabilities based on search results
- Extremely fast Indexing of relevant media*
- Extracted data can be processed for Native or Full Tiff review based on provided search criteria
- Production Image Sets available upon review completion
- Media destroyed in accordance with company's Data Destruction Policy (assuming media is no longer under a hold)

* Indexing is performed on a Forensic Image of the original media

Benefits:

- Collect Once, Produce Multiple Times – Unlike the traditional method of producing media for litigation which often requires Forensic Imaging and Indexing multiple times, your media is only Imaged and Indexed once, but can be searched and produced countless times.
- All Chain of Custody is fully documented, and media is only in transit one time, regardless of the number of lawsuits for which that media needs to be produced
- Secure storage of legally required media in an off-site facility, reducing internal clutter and confusion as well as the possibility of theft or misplacement
- 24 hour secure, dedicated access to your media via any internet connection
- Easy search of all catalogued media for purposes of Litigation Holds and Productions
- All media is Forensically Imaged by a Certified Computer Examiner prior to searching and production, therefore the original integrity is never in question
- Internal Legal and IT departments are freed of managing the data destruction policy for the media
